IV. The Upper Colorado River Recovery Program employs the nation’s expert, the USGS, to provide data to assist in protecting stream for endangered fishes

The USGS operates and maintains the gages as specified in their Cooperative Agreement with the Bureau of Reclamation. USGS produces daily flow and temperature records, which are checked and posted to the internet. Near real-time data is available as provisional on the internet and can be found at:
http://waterwatch.usgs.gov/?id=ww_current

2014 was an above-average snowpack year. Real-time USGS streamflow data were critical in helping managers operate reservoirs to benefit fish habitat and simultaneously prevent flooding in the Colorado’s Grand Valley area.

V. Study Schedule: Initial Year - 1990, Final Year - Ongoing

VI. Relationship to RIPRAP:

Colorado River Action Plan I.A.5: Legally protect in stream flows pursuant to Colorado River PBO;; Green River Action Plan I.A.3.d Operate Flaming Gorge Dam to provide...flows; Duchesne River Action Plan; I.A; ID Year-round flow needs for recovery Yampa River Action Plan; I.A.1; ID fish habitat and flow needs.

VII. Accomplishment of FY 2014 Task and Deliverables: This year was a good snowpack year (~130% of normal) gage data was crucial for managing reservoir operations to try to avoid flooding..

VIII. Recommendations:
IX. Project Status: On track and ongoing. The gages are operational and the information is available from the Internet, Watertalk, and the USGS Water Resource paper for Colorado and Utah.
