

This data object is where the new Mexico ETCCR sites will come into from the DM ETACDM#CR.

The ETCCR#CR#CR Ingress to the report ETCCR sites, directly backcalculated from the baseline from Mexico Energy Codes run at Feb 20, 2016, provided by NRC OGE.

The ETACDM#CR disaggregation method uses the monthly CR at the base.

San Juan Chama "Recapition" is done in these objects. If the explicit operation is used set by the power set in the hydrological data object, the San Juan boundary flow will be adjusted at the time of the S30MonthlyFlowAdjustment reach.
